Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It helps the project team understand the target user's needs, goals, challenges and expectations before designing the solution.

Target User Persona: Student / Blogger / Content Creator

SAYS • “I want to create a blog quickly.” • “I need help generating blog content.” • “I want to edit my blog whenever I need.” • “I want a short summary of lengthy content.”	THINKS • Writing a complete blog manually can take a lot of time. • AI can help me create an initial draft and ideas. • I should be able to control and edit AI-generated content. • My account and blog data should be protected.
DOES • Registers and logs into the application. • Creates, views, updates and deletes blog posts. • Uses AI to generate blog content. • Uses AI summarization to understand lengthy content.	FEELS • Overwhelmed when starting a blog from a blank page. • Relieved when AI provides a useful starting point. • Confident when generated content can be edited. • Satisfied when long content can be summarized quickly.
PAINS • Manual blog writing takes time and effort. • Difficulty generating ideas or a first draft. • Reading and understanding lengthy blog content. • Need for secure login and reliable blog management.	GAINS • Faster blog creation with AI assistance. • A quick starting point for content generation. • Easy CRUD operations for managing blogs. • Quick summaries and secure authenticated access.

Project relevance: The map focuses on the user needs addressed by AI BlogNest: authenticated access, blog creation and management, AI-assisted content generation, and AI summarization.
