

Project Design Phase

Problem – Solution Fit Template

Date	15 February 2025
Team ID	6ab4c24ba238dc999eb5437a
Project Name	AI BlogNest API
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The canvas below applies the same categories shown in the provided example to AI BlogNest.

1. CUSTOMER SEGMENT(S) Students, bloggers, content creators and API clients that need to create, manage or process blog content.	2. JOBS-TO-BE-DONE / PROBLEMS Create blog posts; manage existing posts; generate a first draft from a topic; understand lengthy content quickly; access these functions through a REST API.	3. TRIGGERS Need to publish a new blog, difficulty starting a draft, need to update or delete an existing post, or need a quick summary of long content.
4. EMOTIONS: BEFORE / AFTER Before: time pressure, difficulty starting content, or effort required to read lengthy text. After: more convenience, a quicker starting point and easier content management.	5. AVAILABLE SOLUTIONS Manual blog writing and editing, conventional CRUD-based blog systems, and separate AI writing or summarization tools can address parts of the problem.	6. CUSTOMER CONSTRAINTS Time, effort, need for authentication, dependence on internet/API availability, AI service access and the need to manage data securely.
7. BEHAVIOUR Users register or log in, send authenticated blog requests, create/read/update/delete posts, generate AI content and request summaries.	AI BlogNest PROBLEM → SOLUTION FIT AI-assisted blog generation + summarization + authenticated CRUD API	8. CHANNELS OF BEHAVIOUR ONLINE: REST API clients, web/mobile clients, Thunder Client or Postman. OFFLINE: drafting content manually before submitting it through the API.
9. PROBLEM ROOT CAUSE Blog creation and management can involve repetitive manual work, while generating a first draft and summarizing lengthy content require additional time and effort.	10. YOUR SOLUTION AI BlogNest combines authenticated blog CRUD APIs with Gemini-powered blog generation and summarization in a Node.js/Express backend connected to MongoDB.	CUSTOMER VALUE Faster creation • easier management • quicker understanding

Project basis: AI BlogNest documentation describes user registration/login, JWT-protected routes, blog CRUD, AI blog generation and AI summarization.
