

Project Design Phase
Proposed Solution Template

Date	15 February 2025
Team ID	6ab4c24ba238dc999eb5437a
Project Name	AI BlogNest API
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Students, bloggers and content creators may spend significant time creating and managing blog content. They also need a quick way to generate initial content and summarize lengthy material.
2.	Idea / Solution description	AI BlogNest is a RESTful backend that provides user registration/login, JWT-protected access, blog create/read/update/delete operations, AI blog content generation and AI summarization through API endpoints.
3.	Novelty / Uniqueness	The solution combines normal blog management APIs with AI-assisted generation and summarization in one backend service, while keeping authentication and blog operations organized through an MVC-style architecture.
4.	Social Impact / Customer Satisfaction	The system can reduce the effort involved in starting blog content, help users understand lengthy content through summaries, and provide organized blog management with authenticated access.
5.	Business Model (Revenue Model)	The project is currently an academic backend prototype. A future deployment could use a free basic tier and paid plans based on AI usage, storage or advanced content features.
6.	Scalability of the Solution	The REST API structure can be extended with additional AI features, more blog categories, richer user roles, frontend clients and production deployment. Database and service layers can also be scaled as usage grows.
