

Project Design Phase

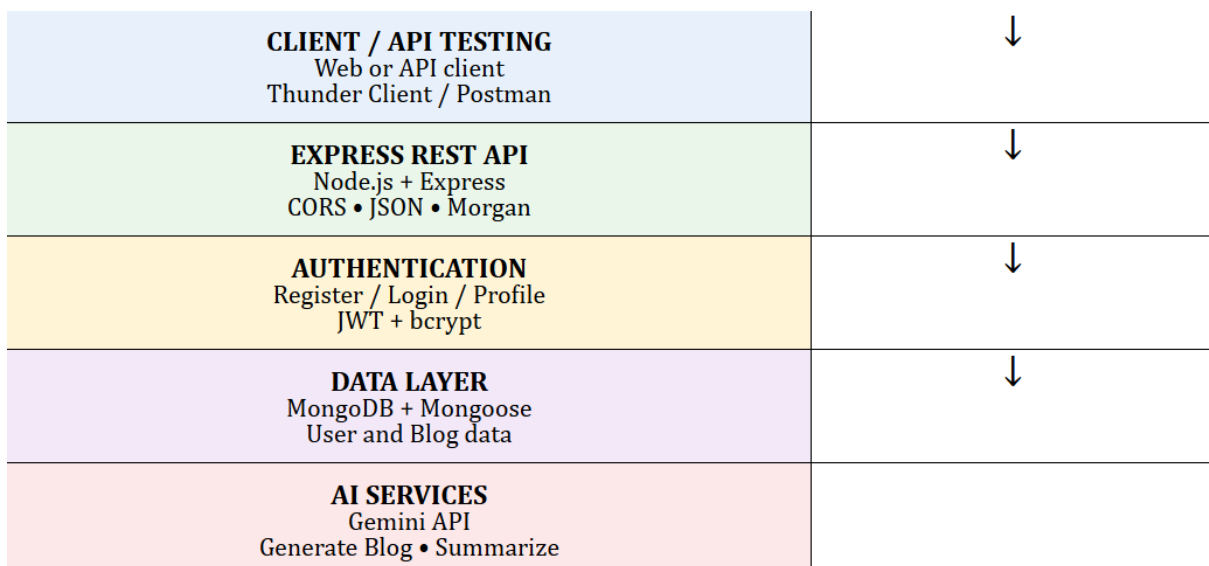

Solution Architecture

Date	15 February 2025
Team ID	6ab4c24ba238dc999eb5437a
Project Name	AI BlogNest API
Maximum Marks	4 Marks

Solution Architecture:

The architecture for AI BlogNest connects users and client applications to a RESTful backend, authentication services, MongoDB data storage and Gemini-powered AI services.

Example - Solution Architecture Diagram:

Main Data Flows

1. User → Express API: registration, login, profile and blog requests.
2. Express API → JWT/bcrypt: authentication and protected route handling.
3. Express API ↔ MongoDB: store and retrieve user and blog information.
4. Express API → Gemini AI: generate blog content or summarize supplied content.
5. API response → Client: JSON response containing the requested result.

Technology components: Node.js, Express, MongoDB, Mongoose, JWT, bcrypt, Gemini-powered AI, Axios, dotenv and API testing with Thunder Client/Postman.
