Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	Not provided in the uploaded materials.
Programming Language(s)	JavaScript (Node.js)
Framework(s) Used	Express.js; Mongoose ODM

Key Features Implemented	User registration/login; JWT authentication; profile retrieval; blog CRUD; Gemini-based blog generation and summarization; centralized error middleware.
Pending / Incomplete Features	No pending feature is identified in the README. Frontend UI and measured performance results are not included in the supplied materials. Verify route implementations from the complete source repository.
Setup / Run Instructions	1. Install Node.js (v18 or later). 2. Configure PORT, MONGO_URI, JWT_SECRET, GEMINI_API_KEY and GEMINI_MODEL in .env. 3. Run npm install. 4. Run npm run dev (development) or npm start. 5. Test endpoints using the supplied Postman/Thunder Client collection.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Partial
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Partial
4	Error handling is implemented for critical operations	Partial
5	The application runs without critical errors	Not verifiable
6	Code is committed to a version control repository	Not verifiable

Additional Notes / Comments:

Additional Notes: The supplied package.json, README, app.js, server.js and API collection support the above summary. The route, controller, model and database-connection implementation files were not included in this upload, so a complete code audit and independent run verification cannot be claimed. The .env file contains placeholder credentials; add real secrets locally and do not publish them.
